Vertiv Password Guide

Passwords are an important part of computer security, as they are the first line of defense in preventing unauthorized access to the organization's information systems, services, and networks.

Hackers are successful using celebrity names, terms from pop culture and sports, and simple keyboard patterns to break into online accounts because they know people are using them as easy-to-remember combinations.

The following are requirements and recommendations for strong passwords that will help to protect your data and keep our Vertiv information safe.

Password Policy

1. Passwords must be at least fourteen (14) characters in length.
2. Passwords are only valid for 180 days.
3. Passwords must be unique. You cannot reuse your last 8 passwords.
4. Passwords must be strong and contain 3 of the following 4 categories of characters:
    a. Uppercase characters *(i.e., ABCDE....)*
    b. Lowercase characters *(i.e., abcde....)*
    c. Numbers *(i.e., 12345....)*
    d. Special characters *(i.e., !@#$%....)*
5. It cannot contain characters that match two or more consecutive characters of your username or full name.
6. A minimum password age is one day. (Once you change your password, you must wait 24 hours before you can change it again).

Tips for Managing and Protecting your Passwords

- Do not disclose or share your password with anyone.
- Do not include passwords in an automated logon process (i.e., do not store passwords in a macro, logon script, or function key).
- Do not use guessable words that can be found in the dictionary or Vertiv product and brand names (i.e., Vertiv1 or Password1).
- Avoid keeping a paper record of passwords.
- Use different passwords for accounts that provide access to restricted data than for lower security level classification data or personal accounts.
- Change your password immediately if you suspect that your password has been compromised. Promptly report the situation to your direct manager and email Security Incident Response.

Microsoft Security Info Setup

Prerequisite authenticator set-up to enable forgotten password recovery options.

*To utilize the self-service password feature, you **must** have at least two secondary authentication methods set up in your Security Profile. **Please take the time to do so if you have not already.***

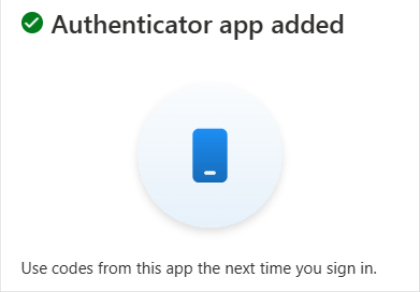

1. Navigate to https://aka.ms/ssprsetup in your web browser.
2. Log in with your email in the "@vertivco.com" format.
3. Complete the OKTA Verify two factor authentication, if prompted.
4. After logging in, you will be prompted to set up your authentication methods. Follow the on-screen steps to set up at least two of the following authentication methods:

**Preferred*

   a. **Phone Number***: Enter your phone number to receive a verification code via SMS or phone call.

   b. **Authenticator App***: Use the Microsoft Authenticator or Okta Verify app to receive verification push notifications via your smartphone.

   c. **Email Address**: Enter a backup email address to receive a verification code.

Change Your Password in Windows

Recommended for users with a Vertiv-issued legacy PC. If unsure of PC type, use next section, instead.

1. **IMPORTANT! Ensure you are connected to a Vertiv office network via either ethernet, GlobalWIFI, or GlobalProtect VPN.**
2. Close all your open windows and applications. This is important to make sure you do not lock out when you change your password.
3. Press **Ctrl + Alt + Del** on your keyboard and select 'Change a password.'

4. **NOTE:** If the **Microsoft - My Account** webpage opens instead of the "Change a password" dialogue pictured below, skip instead to **Step 3** in the next section, Microsoft Online Password Change.
5. Type your current password, new password twice, then press **Enter** on your keyboard.

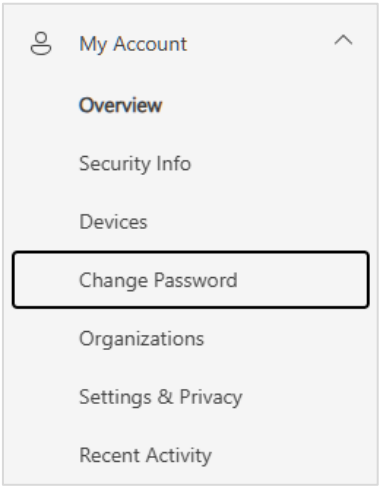

6. Once the password is successfully changed, press **Ctrl + Alt + Del** then log off or restart your machine. Use your **new password** on your next log-in.
7. Also change the password on other devices where you used OKTA for authentication. This prevents your account from being locked out as these devices may attempt to connect with your old, cached password.

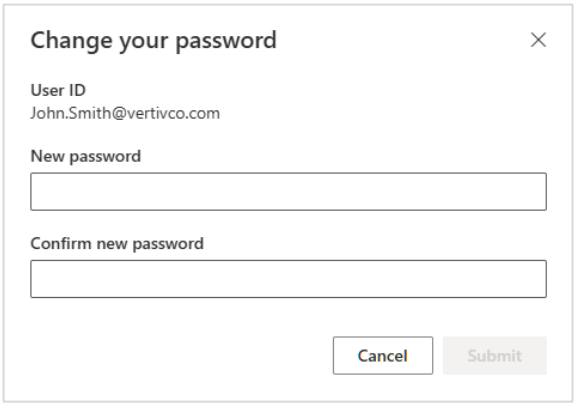

Microsoft Online Password Change

Recommended for all users with a Vertiv-issued PC, including Legacy and Autopilot.

1. **IMPORTANT! Ensure you are connected to a Vertiv office network via either ethernet, GlobalWIFI, or GlobalProtect VPN.**
2. Navigate to myaccount.microsoft.com.
3. Log in with your email in the "@vertivco.com" format.
4. Click "Change Password" in the left sidebar.

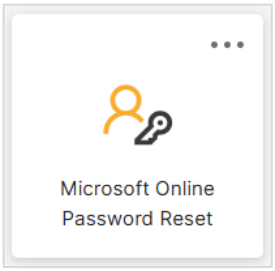

5. Complete the OKTA Verify two factor authentication, if prompted.
6. Enter a new password. Please follow the password guidelines described at the top of this document.

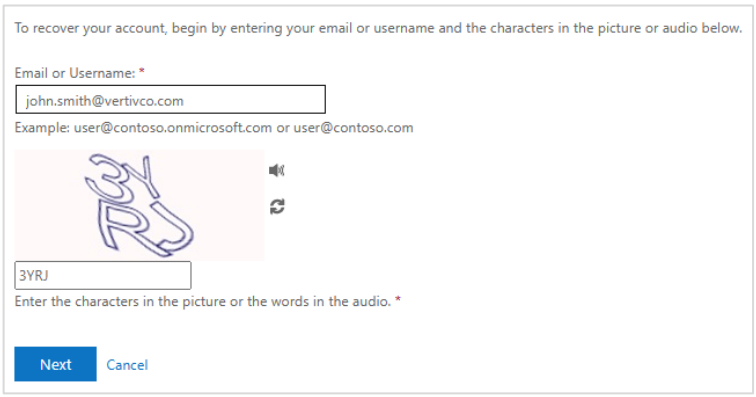

Microsoft Online Password Reset

Self-Service tool for unlocking a locked account or resetting a forgotten password.

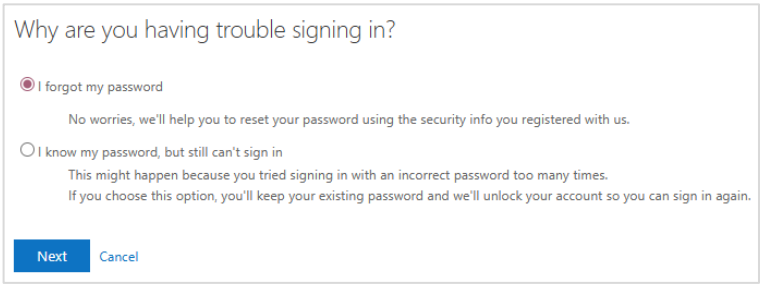

1. Navigate to passwordreset.microsoftonline.com **or** click the Microsoft Online Password Reset tile in OKTA.

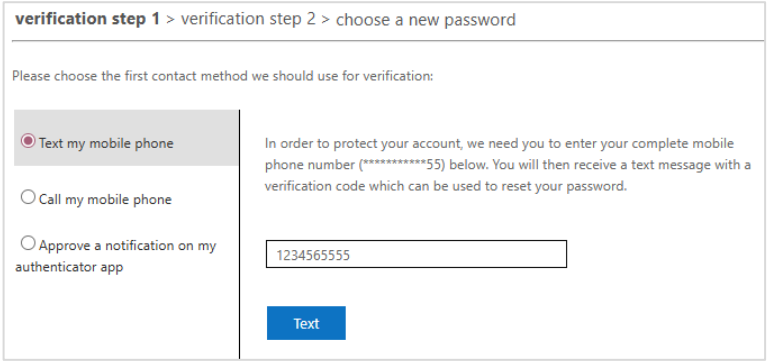

2. Enter your email in the "@vertivco.com" format and complete the Captcha challenge, then click **next**.

3. Select the option corresponding to your scenario, then click **next**.

4. Complete your preferred verification steps.

5. If you selected "I know my password, but still can't sign in," your account should now be unlocked.

6. If you selected “I forgot my password,” enter a new password. Please follow the password guidelines described at the top of this document.
